P R O F E S S I O N A L C A T A L O G U E

It is our pleasure to present you our professional catalogue, intended for all the professionals in the hospitality industry: hotel managers, house keepers, purchasing managers, F&B, head waiters, decorators, architects, interior designers....

In this catalogue, you will find everything that you need with regard to linen trends, with the sizes, weights, qualities, composition, etc. of bath linen and bed linen. And through the photos you will get to touch our products, where we show you some of the real settings we have created.

From our experience, we fully understand our customer's needs, and we adapt to each type of establishment, to the culture of the country and to the current trends, which makes us your guide in terms of textiles. In all cases, the important thing is the satisfaction of our customers, for whom we design and manufacture customized products with an excellent quality which is present in all our items.

We hope that this catalogue is very helpful for your work. We are at your entire disposal for any questions you may have.

With best regards,

A B O U T U S

HAMMAM- HOME was Established 2008 work in a luxurious Egyptian cotton to meet the growing market need for Egyptian cotton Towels & Bathrobes as a part of Arab Development Company, HAMMAM- HOME is member of CBI eu. All our products are made of pure Egyptian cotton, we also manufacture for labels (under labels) and brands.

HAMMAM- HOME was worked with more than 20 Brands for example the following Brands:

- 1- Coca Cola
- 2- Nestlé
- 3- DANONE
- 4- Concorde Elsalam hotel
- 5- MAKADI HURGHADA HOTEL
- 6- Embrator
- 7- Siwa Hotel
- 8- Lukka Home
- 9- Lili linen Home
- 10- MB3
- 11- TeloresMedin - Croatia
- 12- MiedoBulgaria
- 13- Hussein Brothers - Lebanon
- 14- Tagory – Belgium

A B O U T U S

The company has participated in many international and local exhibitions for example:

- 1- Heimtextile 2016 International trade fair, which takes place in Germany annually.
- 2- Heimtextil 2017 International trade fair Germany .
- 3- Maison&Objet Paris 2018 International trade fair which takes place in France annually.
- 4- Cairo Fashion&Tex March 2017 International trade fair which takes place in Egypt
- 5- Cairo Fashion&Tex September 2017 International trade fair Egypt.
- 6- Cairo Fashion&Tex in march 2018 International trade fair .
- 7- Cairo Fashion&Tex in September 2018 International trade fair .
- 8- EGY Tex (B2B) 2018 International trade fair which takes place in Egypt.
- 9- Cairo Fashion&Tex in march 2019 International trade fair
- 10- Cairo Fashion&Tex in October 2018 International trade fair.

Our line of home/bath textile products. Our specialty is bathrobes and Towels so we provide a wide range of designs and materials to meet commercial and personal use as well,

WE are achieving our mission and objective our employees and customers to motivate and supply them 101% satisfaction through out of our every order and commitment,

Our main focus is your comfort, luxury and satisfaction thus we meet your demands with our wide range of products that vary in material, Design and function.

P I L L O W S

A fluffy bed, full of pillows and square pillows, is a trend that is now seen at hotels across the world. These elements create a cozy and different setting, so that the guest can be comfortable and feel right at home.

Pillows play an essential role to create this feeling. In addition to the comfort they provide, they are combined with decorative cushions in the same color as the elements of the hotel room to contrast with the white of the sheets.

There are establishments that can layer up to 10 or 12 pillows on the bed. To distribute them in a careful and coordinated way, pillows, according to their shapes and, usually, from the biggest to the smallest ones, although there can be sizes variations in the middle of the composition.

When someone goes to bed, they use the pillow that suits them best to get a good sleep, since, based on their sleeping position, they must use the pillow most adapted to their needs. Pillows are linked to health at night, so hotels offer menus with different pillow types for every kind of person.

To sleep on your stomach, the best choice is a soft and low pillow.

To sleep on your back or if you change your sleeping position repeatedly, you must choose a pillow of medium height and medium firmness.

To sleep on your side, you will need a thick pillow and firm enough pillow.

Types:

- Soft Quality
- Medium Quality
- Medium-Hard Quality
- Hard Quality

M A T T R E S S T O P P E R

The memory that remains etched after staying at a hotel is closely linked to rest. Guests want to feel at home, not only for the atmosphere created by the elements composing the room, but also for the comfort that the bed provides.

The experience can be terrible if you have a bad sleep due to a noisy or too warm mattress protector. In the latter case, many guests end up taking it off, which can result in damages to the mattress.

Although it is an accessory that remains in the background because it is not visible, its function is key, as it preserves the mattress and promotes rest. Therefore, it is an essential element to provide customers with a pleasant and comfortable hotel experience.

Exterior Fabric: Available in all fabric listed.

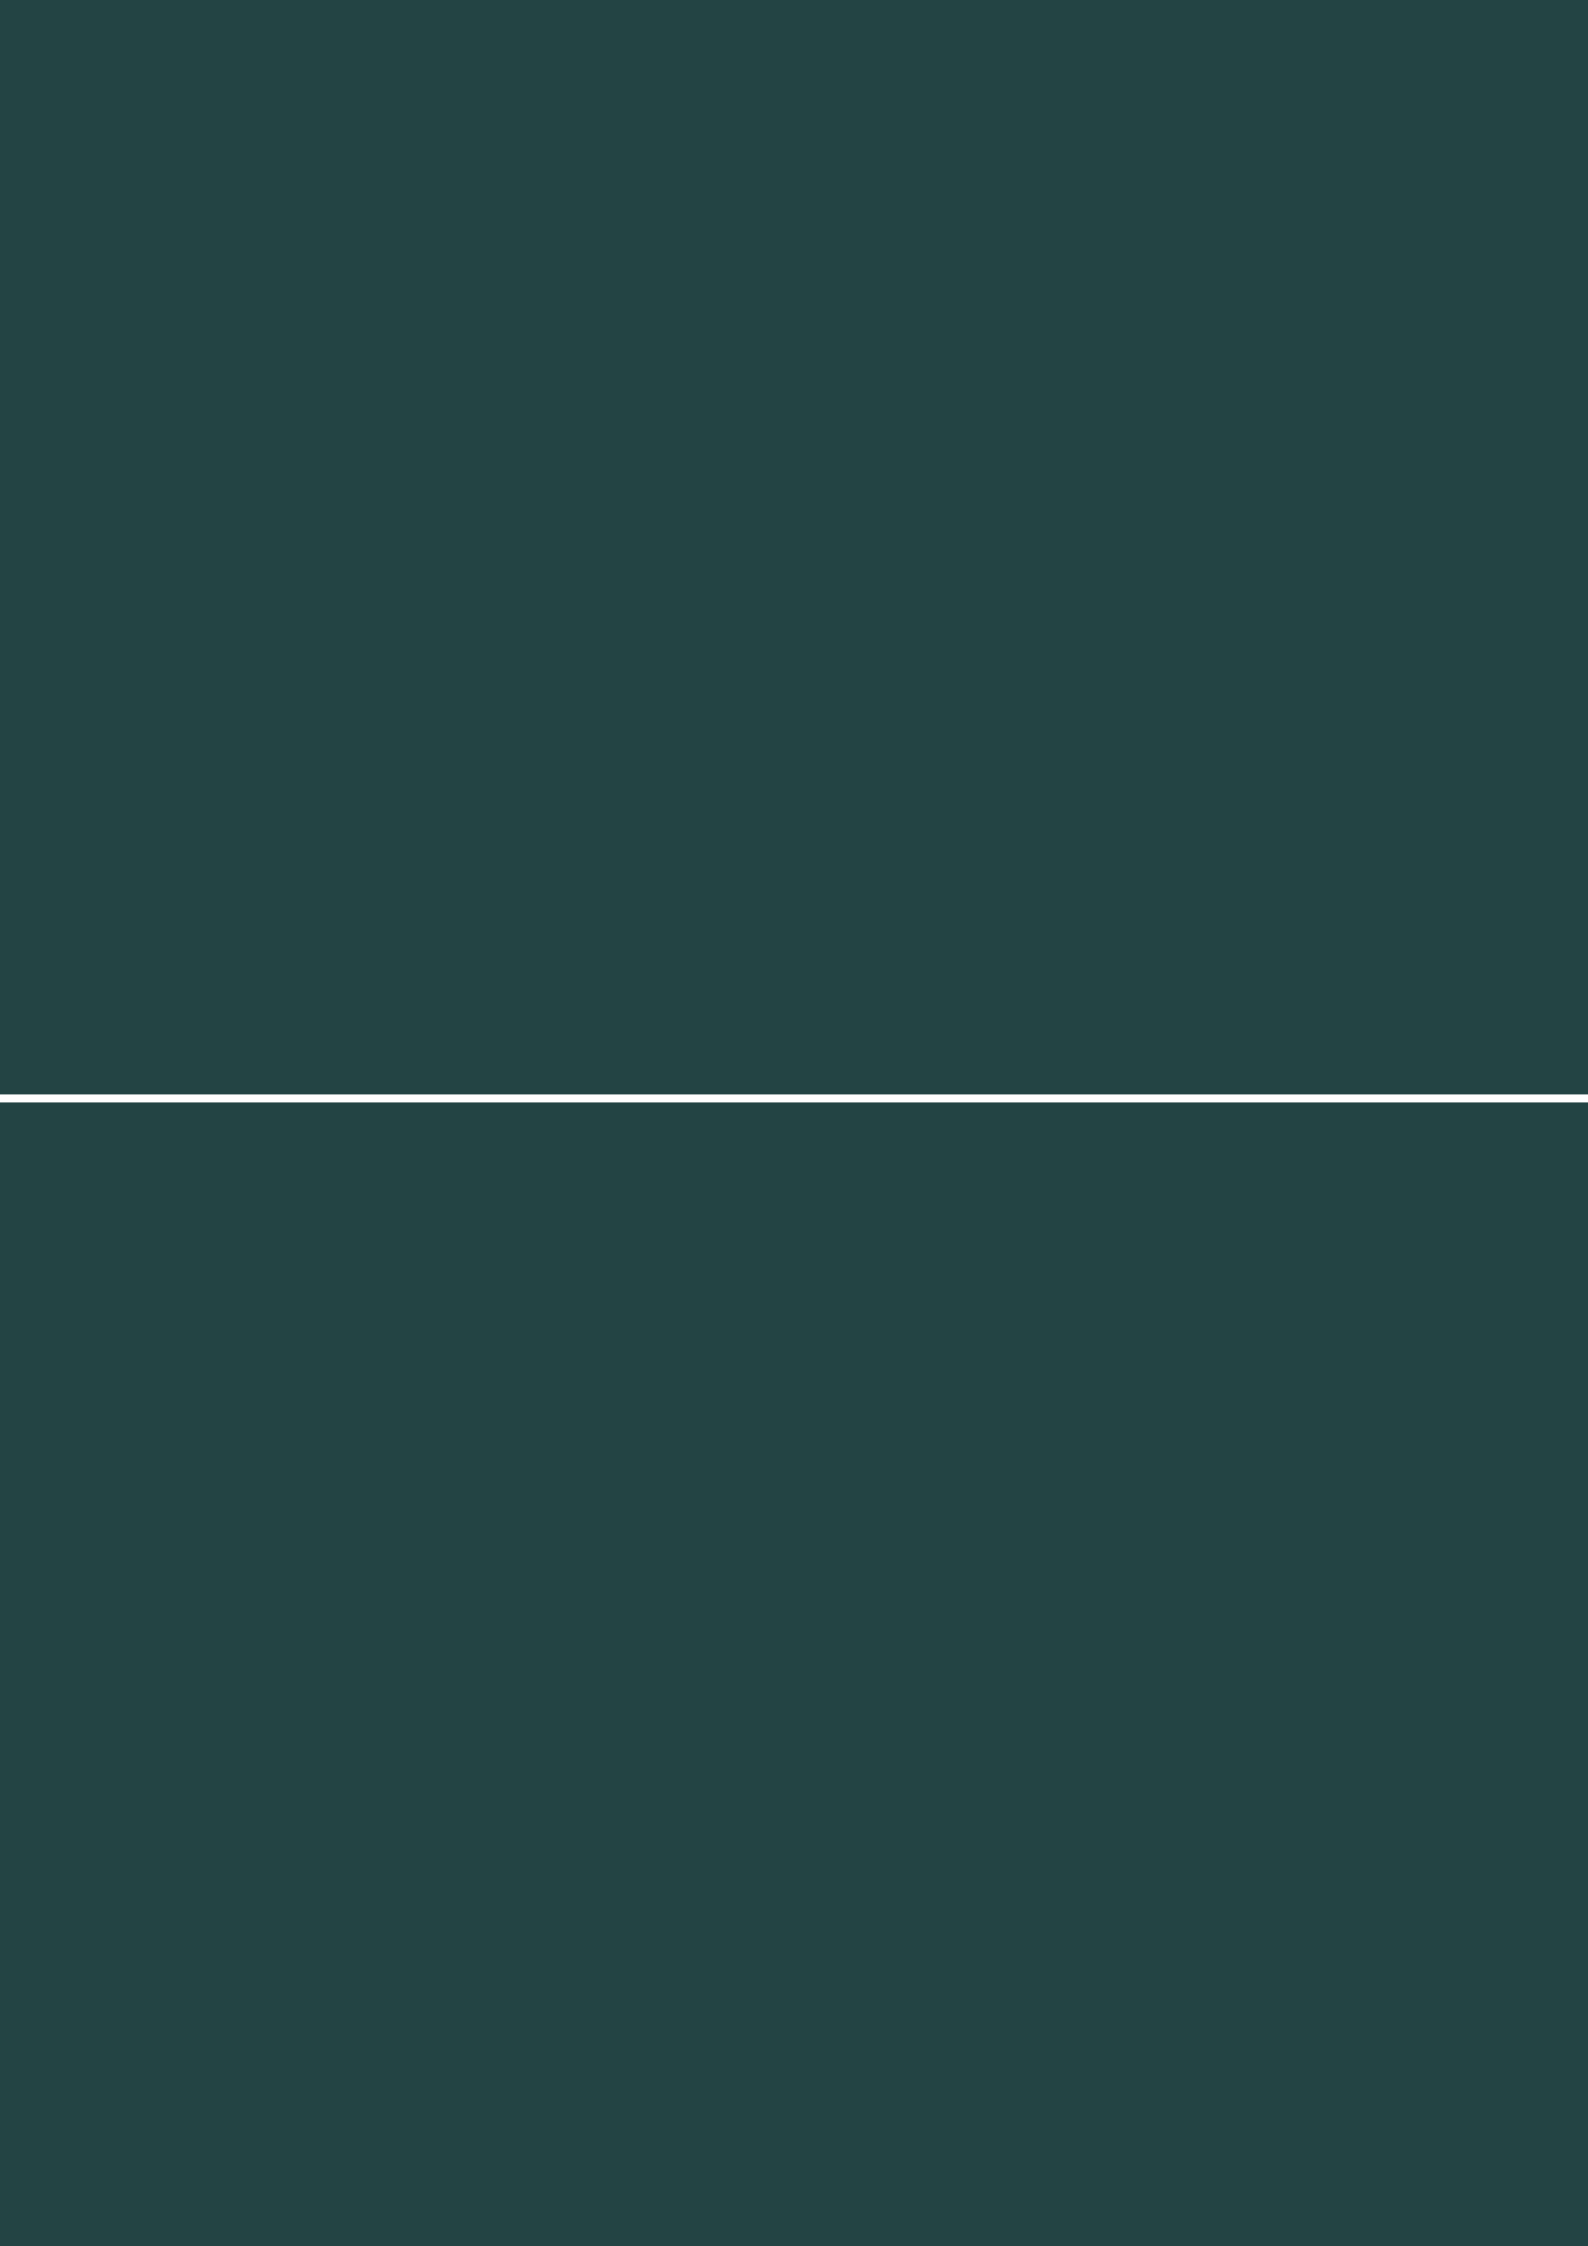

Filling: 100% Polyester, hollow fibre

Filling Density: 100G/M², 150 G/M², 200 G/M²

Confection: 4 elastic corner fittings, Boxes finished with piping

W A S H I N G
I N S T R U C T I O N S

W A S H I N G I N S T R U C T I O N S

Dear Customer,

We congratulate you on choosing HAMMAM-HOME products .

Maintaining HAMMAM-HOME products is very easy: just a few, simple care attentions will suffice to pre-serve the original sensations and the outstanding characteristics of our product in the course of time.

Preliminary tips and notes

New products of pure cotton, pure linen, or linen/cotton union, should always be washed, at least once, separately from the other laundry, before being put in use for the first time. Use more water (higher ratio) and load your washing device with fewer items.

This initial washing eliminates any residues left over from the production processes and puts the linen item in its best conditions for an optimal use. After the first washing, in fact, the fabric recovers its normal shape. During weaving, finishing and tailoring - just to name a few of the many production steps - the fabric is continuously under tension; that is why it may appear somewhat out of shape at a first glance upon receipt. After washing, fibers swell and compact regaining the original shape. A shrinkage in the two directions of the linen item (i.e. warp and weft, respectively the length and the width of the cloth) is normal practice with fabrics of natural fibers (cotton, linen).

If a mangle (roll ironer) is used, feed the linen in length, normally, but not always, this is the direction of the warp of the fabric. By the same token, flat items (e.g. bedsheets and tablecloths) will be introduced by the hem (not the selvedge, if any). Items with a pocket (e.g. pillowcases and duvet covers) by the side which is opposite the opening.

The contents of the pages that follow are guidelines for the maintenance of each line of product as out- lined in the respective care labels. Further adjustments of the wash cycle, which may be due to different types of water and machinery, will be developed from these bases.

HAMMAM-HOME products are manufactured, in line with the most recent recommendations as re-gards to the environmental sustainability, to perform very well to laundering and ironing.

Therefore:

- Do not exceed the temperatures during the washing and ironing processes, causing unnecessary consumption of energy, and

B E D L I N E N S

First washing

New linens should be soaked in cold water for some 12 hours before washing for the first time through a regular laundering program. Soaking may be effectively substituted by a couple of the rinsing cycles of an industrial washer. Use more water (higher ratio water to linens) and load your washing device with fewer items.

Following washings

- Prewash at °40C (°104F).
- Wash with detergents at °60C (°140F). For very soiled, and white items, the washing temperature may be increased to °75C (°169F).
- Bleach, if necessary, using oxygen-based products. If, instead, chlorine bleach is used, never exceed the prescribed concentration otherwise the appearance and the life-cycle of the linen item will be adversely affected.
- Rinse thoroughly, lowering the temperature of the water, to remove chlorine and any chemical agents.
- Carry out normal neutralization at the end of the washing cycle to neutralize all bleach residues and to reduce the alkalinity.

Use of detergents and bleaches

- To obtain the best results in washing, the dosage of the detergents and bleach should be adjusted to the specific characteristics of the water and correctly tuned by your supplier of detergents in collaboration with the manufacturer of your laundry equipment.
- Color linens: never use detergents containing optical brightening agents (OBA), you may experience alterations in color.

Drying and ironing

- Pressing and tumbling are steps in which care must be used.
- Set the pressure of the press to the lowest level as possible or gentle spin, and make sure that drying be at low temperature, gentle process, to obtain a residual humidity of 52 to %55 (i.e. 1.00 kg of dry linen must weigh 1.52 to 1.55 kg when extracted damp from the tumbler).
- Tumble-drying too long and at a too high temperature damages bed linens by causing creases, abrasions, elephant-skin wrinkles, and shrinkages of up to %20!
- Iron linen on a mangle or calander having a roller temperature not exceeding °185C (°365F).

Way of treatment

- Never overload the washing machine.
- Colour linens: always keep separate from white.
- Neither exaggerate with dosages nor exceed the dosage concentration.
- Enzymes or sodium-peroxide-based bleach should be preferred to remove heavy soil or stains.
- If and when bleaching is required, pour the bleach solution in the washer mandatorily when the water is at full level and the linens are properly wet. Never leave bed linens (wet or dry) in the tumble drier: that may cause burns or create permanent creases in the linens.
- Never iron-dried linens.
- The shrinkage rates of bed linen items are carefully calculated. Inserting the product into the mangle in the weft direction (that is to say width instead of length) causes an abnormal shrinkage in the product length (up to %10).

BATH LINENS

First washing

New towels and bathrobes should be soaked in cold water for some 12 hours before washing for the first time through a regular laundering program. Soaking may be effectively substituted by a couple of the rinsing cycles of an industrial washer. Use more water (higher ratio water to linens) and load your washing device with fewer items.

Following Washings

- Prewash at °40C (°104F).
- Wash with detergents at °60C (°140F).
- Bleach, if necessary, using oxygen-based products. If, instead, chlorine bleach is used, never exceed the prescribed concentration otherwise the appearance and the life-cycle of the linen item will be adversely affected.
- Rinse thoroughly, lowering the water temperature, to remove chlorine and any chemical agents.
- Carry out normal neutralization at the end of the washing cycle to neutralize all bleach residues and to reduce the alkalinity.

Use of Detergents and Bleaches

- To obtain the best results in washing, the dosage of the detergents and bleach should be adjusted to the specific characteristics of the water and correctly tuned by your supplier of detergents in collaboration with the manufacturer of your laundry equipment.
- Color linens: never use detergents containing optical brightening agents (OBA), you may experience alterations in color.

Drying and Ironing

- Pressing and tumbling are steps in which care must be used.
- Set the pressure of the press to the lowest level as possible or gentle spin, and make sure that drying be at low temperature, gentle process.

Way Of Treatment

- The loops of new terry towels and bathrobes are not yet fixed and therefore they pull easily if not handled with the utmost care. It is only after washing that the fabric compacts, and the loops stabilize in the ground-weave, acquiring the desired strength, softness and absorption properties.

We strongly recommend to open the packaging with particular attention and care.

- Do not add any softener.
- Never overload the washing machine.
- Color linens: always keep separate from white.
- Neither exaggerate with dosages nor exceed the dosage concentration.
- Enzymes or sodium-peroxide-based bleach should be preferred to remove heavy soil or stains.
- If and when bleaching is required, pour the bleach solution in the washer mandatorily when the water is at full level and the linens are properly wet.

CARE LABELLING SYMBOLS

For all products, please make reference to the Care Symbols shown in the care label affixed.

WASHING
(Wash Tub)

BLEACHING
(Triangle)

DRYING
(Square)

IRONING
(Hand Iron)

DRY-CLEANING
(Circle)

A few samples to help reading the care symbols:

WASHING

The numbers in the washing tub specify the maximum temperature in °C which must not be exceeded. The bar underneath the wash tub characterizes a mild process with reduced mechanical action especially for easy care articles. The double bar indicates a very mild process especially for woollen articles.

BLEACHING

Any oxidizing bleaching agent allowed

Only oxygen/non-chlorine bleach allowed

Do not bleach

DRYING

The number of dots indicates the severity as regards to temperature of the tumble drying process.

Tumble drying possible, lower temperature

Tumble drying possible, normal temperature

IRONING

The number of dots indicates the severity as regards to temperature of the hand iron.

110°C

150°C

200°C

DRY-CLEANING

Professional dry cleaning mild process. The letters within the circle specify the solvents that can be used.

(P = Perchloroethylene, hydrocarbons; F = Hydrocarbons). The bar under the circle indicates a mild professional dry cleaning process, the double bar a very mild process. These may concern mechanical action and/or drying temperature and/or water addition in the solvent.
